

Hala Brand Guidelines

How Hala looks, sounds and behaves in marketing — built from the product site at hala.khaashub.com, for anyone making social content on the brand's behalf.

VERSION 1.0 AUGUST 2026 MARKETING & SOCIAL MEDIA A KHAAS HUB PRODUCT

An AI Employee, not a chatbot.

Hala answers every call, message and enquiry on the first ring, books customers in, follows up, and hands over to your team when someone needs a person. That sentence is the brand — every piece of marketing is some part of it made concrete.

The name

هالا means **halo**. The name also lands as a greeting — "Hala!" is how you welcome someone in much of the Arabic-speaking world, and it sounds close to "Hello". A name about answering warmly, worn by a product that answers. In every language, the brand is written **Hala** in Latin script — including inside German and Arabic sentences.

Who it speaks to

Owners of busy local businesses — restaurants, takeaways, salons, clinics, trades — who lose customers every day to an unanswered phone. They are practical, time-poor and allergic to tech hype. The brand speaks to them **in their working day**: Friday 19:42, mid-service, plating desserts. Never in AI-industry language.

Positioning spine

The core promise is **industry-neutral** — customers, enquiries, appointments. Sector-specific words (covers, allergens, stylists, patch tests) belong only in industry-scene content, one sector at a time. This is how the site is written, and marketing follows the same rule: adding an industry never changes the core message.

Product and parent

Hala is **a Khaas Hub product**. The lockup is "Hala by Khaas Hub" — Hala leads, the byline stays quiet and never grows to equal weight. On social profiles, Hala gets its own accounts; Khaas Hub appears in the byline, the about text and nowhere else.

The one-sentence test. If a post can't be traced back to "answers on the first ring, books, follows up, hands over", it's off-brand — however clever it is.

An open ring, and a reply.

The mark is an open ring — هاله means halo — with a dot resting where the ring opens. The gap reads as a speech tail, the dot as the reply. The dot is the same green the product uses for live status: by the time someone has seen the brand twice, they know what that green means.

The 90° gap is centred at the bottom so both ends land at the 4 and 8 o'clock positions — where a headset's earcups sit. The double reading is deliberate: **a halo to anyone who knows the name's meaning, a headset to everyone else.** One end carries the dot; the other is left plain. Two dots would make it just a headset; none would make it just a ring.

PRIMARY · COLOUR ON DARK · $\geq 24\text{PX}$

SMALL CUT · $< 24\text{PX}$ · HEAVIER STROKE, BRIGHTER RING

ON LIGHT · SAME COLOURS, NO OUTLINE, NO SHADOW

MONO WHITE · PRINT, EMBROIDERY, WATERMARKS

MONO BLACK · LIGHT SINGLE-COLOUR
CONTEXTS

LOCKUP · MARK + WORDMARK, JAKARTA 700

Clear space & minimum size

Keep clear space around the mark equal to **half the ring's diameter** on every side.

Minimum sizes: 20px for the small cut, 24px for the standard cut, 32px for the lockup. As an avatar, the mark sits alone at roughly 60% of the tile on the Night background — never the lockup, which dies in a small circle.

Don't

- **Don't "correct" the gap** into a tidy speech-bubble opening or close it into a full circle — the 4- and-8-o'clock opening is the whole idea.
- **Don't recolour the dot.** It is Live Green because green means "live" everywhere in the product. An indigo dot is a different brand.
- **Don't add a second dot**, rotate the mark, outline it, add gradients or drop shadows, or set it in a container shape.
- **Don't put the colour mark on busy photography** or mid-tone backgrounds — switch to mono white/black instead.
- **Don't redraw the wordmark.** It is always Plus Jakarta Sans 700 with -0.01em tracking, white or near-black.

Dark—first, one accent, and a green that means something.

Hala is a dark brand: near-black surfaces, white type, one indigo accent, hairlines instead of boxes. Colour is used sparingly enough that when it appears, it carries information.

Night

#08080A

The background. Every social canvas starts here.

Panel

#141418

Cards and raised surfaces.

Inset

#1C1C21

Bubbles, inputs, inner surfaces.

Deep Indigo

#6E7BF2

The accent. One emphasised word per headline, primary buttons, the ring.

Indigo Bright

#8E9BFF

Small sizes and small text on dark, where #6E7BF2 loses contrast.

Live Green

#3ECF8E

Live status, confirmations, booked outcomes, the dot. Nothing else.

White

#FFFFFF

Headlines and primary text.

Muted

#A8A8A8

Body copy on dark.

Faint

#707070

Captions, metadata, eyebrows, bylines.

Supporting values

TOKEN	VALUE	USE
Hairline	<code>rgba(255,255,255,0.10)</code>	Borders and dividers — the brand draws with hairlines, not filled boxes.
Accent soft	<code>rgba(110,123,242,0.14)</code>	Indigo washes: agent bubbles, tinted panels, gradient glows.
WhatsApp green	<code>#25D366</code>	Only as an icon tone when representing the WhatsApp channel.
Amber	<code>#F59E0B</code>	Only as an icon tone for background automations. Never for warnings in marketing.

Rules

- **Roughly 90% of any canvas is Night, Panel and type.** Indigo is an accent, not a fill — if a design feels "very purple", it's wrong.
- **One indigo word per headline.** The site emphasises exactly one word ("lead", "first ring") — never whole sentences.
- **Green only ever means live / confirmed / booked.** Don't decorate with it; it's the payoff colour that shows the job got done.
- **Light backgrounds are the exception** (print, co-branding). On white: Night for type, Deep Indigo as accent, and the same green rule.
- **Contrast:** body text on dark is Muted or lighter; small indigo text uses #8E9BFF. Never Faint below 12px.

Jakarta speaks. Inter explains.

Two families, one job each. **Plus Jakarta Sans** carries every headline, price and UI label — it holds its weight from hero size down to a card title without turning fragile or fashion-editorial. **Inter** carries body copy. A system monospace carries eyebrows and metadata.

DISPLAY · JAKARTA 700 · TRACKING -0.025EM · 32PX AND UP

Turn every conversation into a lead.

HEADING · JAKARTA 600 · TRACKING -0.02EM · 22–31PX

It answers the phone like your best team member would.

UI / CARD TITLES · JAKARTA 600 · TRACKING -0.01EM · BELOW 22PX

Appointment booked — Thu · 2:15 PM

BODY · INTER 400 · MUTED ON DARK

Bookings, prices, opening hours and awkward questions — handled to the end, without pulling anyone off the job.

EYEBROW / META · MONOSPACE · UPPERCASE · $+0.13\text{EM}$

AN AI EMPLOYEE FOR YOUR BUSINESS

Rules

- **Tracking follows optical size:** -0.025em at 32px+, -0.02em at 22–31px, -0.01em below 22px. One negative value everywhere makes small text cramped.

- **Weights:** 700 for display, 600 for headings and UI, 400–500 for body. Nothing lighter than 400 on dark.
- **Sentence case everywhere** except mono eyebrows, which are uppercase with +0.13em letter-spacing.
- **Headlines end with a full stop** when they're statements — it's part of the plain-spoken register.
- **Arabic** uses IBM Plex Sans Arabic inside the same stacks — Latin words, including "Hala", keep the Latin face inside an Arabic sentence.
- **Fallbacks** when the brand fonts are unavailable (e.g. plain-text platforms): system sans. Never substitute a serif or a rounded display face.

05 · VOICE & TONE

Plain-spoken, concrete, and on the owner's side.

Hala sounds like a sharp, calm colleague explaining something over the counter — not a SaaS landing page. The register is British, direct and specific. If a sentence could appear in any AI company's deck, it doesn't belong here.

Principles

- **Scenes, not claims.** Start where the reader is standing: "Friday, 19:42. Everyone's mid-service." A time and a situation beat any adjective.
- **Numbers do the talking.** First ring. 60 seconds. 24 hours. Live in 48 hours. Never "revolutionary", "seamless", "game-changing", "supercharge".
- **Second person, their world.** "Your hours, your services, your prices, your policies." The product is described by what it takes off the owner's plate.
- **An employee, not a bot — but never a secret.** Hala is written about like a capable colleague ("it answers", "it books", "hands over"). At the same time, customers must always be told they're talking to an AI. Warm, never deceptive.
- **Short sentences with rhythm.** "1 employee. 6 channels. Every hour of the day." Fragments are fine. Exclamation marks are not — the brand almost never uses them.

- **Honest to a fault.** No invented stats, no fake testimonials, no integration we don't have. The site holds its proof section empty until a real customer will be named; marketing does the same.

● SOUNDS LIKE HALA

Your phone rings at 19:42 on a Friday. Everyone's mid-service. Nobody picks up. That call was a table of four.

A text back within a minute of every missed call. A nudge when an enquiry goes quiet.

It answers the phone like your best team member would.

Concrete time, concrete loss, plain verbs, the owner's vantage point.

× DOESN'T

Revolutionise your customer engagement with cutting-edge conversational AI! 🚀

Our proprietary LLM-powered omnichannel platform delivers seamless CX at scale.

Say goodbye to missed calls forever!!

Hype adjectives, industry jargon, exclamation marks, and nothing the reader can picture.

German

German copy is a **rewrite, not a translation** — idiomatic first, faithful second. Register is **Sie throughout**, without exception; the buyer is a business owner and *du* reads as presumptuous. Where English uses "it", German **names Hala as the subject** ("Hala antwortet...") to sidestep the er/sie pronoun choice. Times are 24-hour (14:15), thousands use a dot (1.200), prices are in euros. Everything German should get a native speaker's pass before publishing — especially headlines, where English rhythm rarely survives word-for-word.

Claims discipline. Three claims are off-limits until the facts change: an agent that switches language per caller (each deployment is one language), integrations not yet confirmed, and any customer numbers or testimonials. When in doubt, describe behaviour, not results.

Show the phone being answered.

The strongest thing Hala can post is the product doing its job: a conversation, a booked outcome, a green light. Social content recreates the site's rhythm — dark canvas, one idea per card, one accent word, the URL in the footer.

Content pillars

PILLAR	WHAT IT LOOKS LIKE	TEMPLATE
Scenes	A moment from the owner's day where a call would have been missed — and wasn't. One industry at a time.	Chat card / story chat
How it works	One capability per post: missed-call text-back, one memory across channels, warm handover, live in 48 hours.	Feature card
Straight answers	The pre-demo questions answered honestly: "Will it sound like a robot?" "Is this replacing my staff?"	Headline card
The three bad answers	Answer it yourself / voicemail / answering service — the carousel argument against the status quo.	Carousel of stat/feature cards
Proof	Reserved. Only real, named customers with real numbers — the moment one exists, this becomes the lead pillar.	Stat card

Formats per platform

PLATFORM	SIZES	NOTES
Instagram	1080×1080 feed · 1080×1920 story/reel	Scenes and chat cards lead. 3–5 concrete hashtags. Link in bio to the demo.
LinkedIn	1200×627 link/post image · banner 1584×396	Longer captions work; lead with the scene, end with the demo line. 0–3 hashtags.
Facebook	1080×1080 posts · cover 1640×624	Where local owners are. Same posts as IG; captions can run longer. No hashtags needed.
TikTok / YouTube	1080×1920 vertical · YT art 2560×1440	Real call recordings (with consent) are the format. Verticals double as end-cards; keep YT art content in the 1546×423 safe area.

Template rules

- Every card carries the **mark + wordmark top-left** and **hala.khaashub.com in the footer**, separated by a hairline.

- One indigo word per headline, chosen for meaning ("lead", "first ring") — the accent moves to wherever the emphasis falls in German.
- Chat cards show **real product behaviour only** — exchanges the agent genuinely handles, guest in Inset grey on the left, Hala in indigo wash on the right, outcome card with the green check underneath.
- The **"Answering now" live badge** (green dot + mono caps) is reserved for content showing the product live — don't use it decoratively.
- The oversized **ghost ring** sits at ~5% white opacity, cropped by a corner — never fully visible, never in colour.
- Photography, when it arrives, is real businesses mid-service in low warm light — never stock handshakes, headsets or robots. **No robot imagery, ever.**

The templates

Hi — do you have anything Thursday afternoon?

I have 2:15 or 4:30 on Thursday. Which suits you better?

2:15 please. Can I pay on the day?

followed up every time.

FACEBOOK-COVER · 1640×624

Compliance on social. If the Hala account replies with AI assistance, say so. The EU AI Act requires customers to know they're talking to an AI — the brand treats that as a feature ("most callers never ask"), not small print. And nothing goes out claiming an unconfirmed integration or an invented result.

What's in the kit.

Everything referenced in this guide ships alongside it. SVGs are the masters; PNGs are exports for platforms that need them. Editable HTML sources for every template are in `render/` — change the copy, re-render, and the design system comes along for free.

PATH	CONTENTS
<code>logo/</code>	Mark SVGs (colour, small cut, mono ×2) · PNG exports 32–512px · lockups (white, black, byline) · avatars 1024px dark/light
<code>templates/</code>	Feed cards 1080×1080 (headline, stat, chat, feature) · stories 1080×1920 (headline, chat) · LinkedIn 1200×627
<code>banners/</code>	LinkedIn 1584×396 · Facebook cover 1640×624 · YouTube channel art 2560×1440
<code>copy/</code>	<code>sample-posts.md</code> — launch, feature, industry and FAQ posts, EN + DE · <code>profile-kit.md</code> — bios and profile text per platform
<code>guide/</code>	This document, plus the PDF export
<code>render/</code>	Editable HTML/CSS sources + <code>render.js</code> (Node + Playwright) to regenerate every PNG
